Daniel Du

Data Scientist at FUBON LIFE INSURANCE CO., LTD.
Taiwan

Summary

Hello! I'm Daniel, and my journey in Computer Science began at Fu Jen Catholic University, where I not only earned my Bachelor's degree but also advanced to obtain a Master's degree from the same esteemed institution. My graduate studies were centered on a fascinating niche within Natural Language Processing (NLP) — specifically, information extraction. This unique focus reflects my broader interest in the ways technology can interpret and manage complex data.

Experience

FUBON LIFE INSURANCE CO., LTD.

Data Scientist

March 2024 - Present (3 months)

Neihu District, Taipei City, Taiwan

I specialize in using OCR technology and deep learning to enhance the extraction and processing of critical information from medical diagnosis documents, specifically for claims insurance systems. My expertise not only improves accuracy but also expedites the workflow, ensuring efficient handling of insurance claims.

Professional Experience:

- Conducted advanced research using the XFUND benchmark, focusing on the development and evaluation of key information extraction models tailored for multilingual environments and claims processing.
- Employed methodologies grounded in the ICDAR 2015 benchmarks with the PaddlePaddle framework developed by Baidu, significantly enhancing OCR accuracy and processing speed for insurance documentation.
- Managed and optimized OCR engines to convert complex medical diagnosis documents into highly accurate digital text, crucial for streamlining claims processing.
- Innovated and refined text detection, recognition, and key information extraction models to reduce manual data entry, thereby increasing efficiency and accuracy in claims insurance systems.

- Led cross-functional team efforts to fine-tune deep learning algorithms, ensuring they adapt to evolving document types and continually advance the capabilities of claims processing systems.

Research Assistant

September 2021 - Present (2 years 9 months)

Xinzhuang District, New Taipei City, Taiwan

Teaching Assistant

September 2022 - Present (1 year 9 months)

Xinzhuang District, New Taipei City, Taiwan

Jasslin Technology Co., Ltd

3 years 9 months

DevOps Engineer

June 2019 - September 2022 (3 years 4 months)

Taishan District, New Taipei City, Taiwan

- Containerization and Virtualization: Leveraged Docker to containerize applications, ensuring consistent environments across development, testing, and production.
- System Administration: Managed and optimized Linux servers and LAMP (Linux, Apache, MySQL, PHP) stack configurations to enhance system efficiency and stability.
- Database Management: Designed and implemented robust database backup solutions across multiple systems to ensure data reliability and quick recovery in the event of system failure. Regularly tested backup procedures to validate and ensure data integrity.
- Web Management: Administered servers using Webmin, simplifying the process of managing Unix systems while improving user interface and accessibility for system operations.
- Automation and Monitoring: Developed scripts and automation tools to streamline deployment processes and monitor system performance, reducing manual intervention and increasing system uptime.

QA Engineer

June 2019 - September 2022 (3 years 4 months)

Taishan District, New Taipei City, Taiwan

- Collaborate with a Vietnamese software development team to ensure comprehensive coverage of manual testing processes for software products.

- Writing documentation including user stories, user requirement specifications, and software development specifications aligned with ISO 9001 standards.
- Develop and execute detailed test cases and test plans to identify software defects and ensure compliance with the end-user requirements.
- Actively participate in the software development lifecycle, applying ISO 9001 workflows to improve product quality and enhance process efficiency.
- Provide feedback and detailed reports on testing outcomes to facilitate bug fixes and product enhancements in collaboration with development teams.

Software Engineer

January 2019 - August 2022 (3 years 8 months)

Taishan District, New Taipei City, Taiwan

Fleet Management System: Engineered a high-throughput, low-latency platform using Apache Kafka to manage real-time data feeds effectively. Implemented Socket.IO for real-time tracking of device signals via TCP/IP packets, significantly enhancing the accuracy and reliability of vehicle monitoring.

Customer Relationship Management (CRM): Implemented CRM functionalities tailored to the company's needs, enhancing user interfaces and workflows to improve user experience and operational efficiency.

License Management (QLM): Created a Quality License Management (QLM) system for managing device licenses and notifications for expiring licenses. Developed automated tools within the system to ensure timely alerts and renewal processes.
